The VBA-based programming language of AutoCAD allows users to automate most drawing tasks in AutoCAD, from creating a drawing and navigating to accessing drawing properties. Users can also export AutoCAD's VBA commands to macros to be executed in VBA, or can write functions in VBA and use them in other software. In the year 2000, AutoCAD was the first drafting program to offer third-party object-based programming. ObjectARX was designed to be completely independent of the underlying architecture of the AutoCAD product line, and has been the basis for a number of products, most notably Autodesk Architectural Desktop, Autodesk Architectural Designer, Autodesk Construct, Autodesk 3D Interiors, Autodesk 3D Eco. Autodesk Architectural Designer was designed to be a CAD application to be used in conjunction with the 3D Interiors product. In August 2015, Autodesk announced AutoCAD 2019 Release 15, which incorporated the 2013 release of Autodesk Fusion 360, as well as a new version of ObjectARX. AutoCAD Architecture was discontinued in May 2016 and Autodesk Architectural Designer was removed from the market in November 2016. Autodesk Architectural Desktop and Autodesk Architectural Designer were the only Autodesk CAD applications that supported "Single CADD". This refers to the ability of users to create AutoCAD drawing objects and edit their own file structure, using only their own computer. It also means that there is no centralized cloud-based storage or database of drawing objects. Autodesk CAD applications require users to manually import any existing 3D objects into the Autodesk CAD application. In the 2017 release of AutoCAD, the option to import a.DWG file was removed. Industry partnerships AutoCAD has been bundled and sold with various software packages. Some include: HCL Design, and HSMS Design programs, used in conjunction with AutoCAD, allow users to view and edit 2D or 3D drawings. Canon and HP scanners use AutoCAD software to control the data collection. Some digital cameras use the software to control the image collection process. Laser rangefinders use the software to control the image acquisition. Mach3D is a computer software package for laser beam measuring applications.
